

January 21, 2021

To whom it may concern:

Westbrook Gardens SLC is a licensed assisted living community in Purcell, OK. We first purchased LastGerm in March 2020. We purchased a second time in October 2020.

I serve as the Infection Control Preventionist RN for our community. Our staff were trained in PPE use and we followed CDC guidelines. Our first outbreak of COVID-19 was in May with one employee and three residents testing positive. All recovered except for one resident who was on hospice, 101 years of age and was already declining rapidly. His physician ruled his death was not due to COVID-19.

Over the next several months we had 3 additional employees test positive who have since recovered and one resident that had no symptoms at all and recovered. The two nursing homes in our area suffered greatly and lost several residents since last March. They did not use LastGerm. I firmly believe that with the grace of God and this product Westbrook Gardens was spared from the spread of COVID-19. We are so fortunate to have not lost any resident or staff member to this pandemic.

I would recommend LastGerm to all communities, at such a reasonable cost we have nothing to lose but everything to gain.

Sincerely,

Holly Mattingly, RN
